AZSTEC

Azstec LLC Fact Sheet

Company Snapshot

Azstec has solved one of the major problems facing both individuals and businesses today: How to protect their confidential information no matter where it ends up or whose hands it gets into. We've solved the problem of document and email security with encryption software that is simple to use, easy to deploy, and effortless to maintain.

Officers & Advisors

- David Griffith, President & CEO
- Imtiaz Munshi CPA, CFO & Founder
- Mark Gibbs, Chief Technology Officer
- Saj Patel, Vice President Development & Founder
- Bob LiVolsi, Business Advisor

Mission

To make securing your confidential information ridiculously simple.

Big, Hairy, Audacious Goal

Our BHAG is for docNCRYPT to be installed and running on every copy of Microsoft Office (there are one billion copies of Office in circulation).

Products

docNCRYPT Microsoft Outlook Plugin

With Azstec's **docNCRYPT Microsoft Outlook Plugin**, Microsoft Office documents are automatically encrypted using an industry standard algorithm, AES-128, built into Microsoft Office. Our **docNCRYPT Microsoft Outlook Plugin** also allows users to manage the passwords associated with recipients and, optionally, can send a separate email or SMS text message (available soon) with a password or password hint. The recipient receives and opens the email directly in her regular Outlook inbox and can read and edit the encrypted Microsoft Office documents.

We make securing your confidential information ridiculously simple!

docNCRYPT Web Plugin

Documents sent and received using online services such as Gmail and Yahoo Mail are protected by **Azstec's docNCRYPT Web Plugin**. The Web Plugin can also use cloud storage services including Dropbox and Box.net to store secured documents giving users complete control over the security of their documents no matter where they're stored or how they're sent and received. It also seamlessly integrates with all of the Office applications you use in your office or home.

docNCRYPT Bundle

So you have complete flexibility in how and where you protect your documents, Azstec also offers a combo license for both **docNCRYPT Microsoft Outlook Plugin** and **docNCRYPT Web Plugin** at a very affordable price.

About Us

Maintaining privacy and confidentiality are becoming major headaches for individuals, small businesses, and organizations of all sizes. Recognizing that there have been no viable solutions – that is, products that are simple to use and cost-effective –Azstec LLC created docNCRYPT, a plugin for Microsoft Office and Webmail systems that solves the problem of document and email security with software that is incredibly simple to deploy, use, and maintain.

Imtiaz Munshi, a CPA, founded Azstec after searching for practical solutions to keep his clients' information secure. He found available products to be overly complex, confusing, and expensive and none of them solved the problem of protecting confidential files both in transit (email) and at rest (at both the sender's and recipient's ends as well as in cloud storage). Many of these products required custom email applications or own hosted or Internet portals often with complex setup and registration processes and none of them worked within the normal workflow of his business.

Munshi developed the concept of docNCRYT with a software engineer, Saj Patel, and by leveraging existing and proven technology in Microsoft Office they were able to build a document encryption solution that met all of their goals.

After two years of development and testing in real world environments docNCRYPT is now being used every day and protects confidential information in CPA firms, financial advisors, attorney's offices, medical offices, and scores of other businesses.

We make securing your confidential information ridiculously simple!

Whether you need to protect your customers' information due to regulations such as HIPAA, HITECH, SEC, and PCI or just to observe good business practice, docNCRYPT is the simplest, lowest overhead, and most cost effective way to move, store, and protect your and your customers' sensitive information.

We've made it just as easy to evaluate and purchase docNCRYPT, as it is to use. Download our free thirty-day trial from www.azstec.com and you can be up and running in minutes.

When you try docNCRYPT we'd love to hear about your success and how it improves your security as well as your suggestions and comments on how to improve our products. Contact us at info@azstec.com.

Key points

1. We make securing your confidential information ridiculously simple!

2. Our software will be the most practical, simple, easy to use product available in our market. We develop software that solves real-world problems. No exceptions. Cybersecurity is one of the pressing problems of the digital age and the world has plenty of cybersecurity "solutions" (including email encryption) and most of them are not effective because they do not address the single biggest problem. People.

3. We don't collect or have any information about our customers or how they use our products. All of our customer's passwords are encrypted and stored in the location they and they alone chose. We manage information about product license keys and nothing else. We believe making a secure product doesn't involve tracking customer information.

4. We provide current, relevant and useful information on cybersecurity on our website for our customers, and non customers alike. Our objective is to make their digital lives more secure. Even if they don't user our product, they eventually will need it, or will refer us to someone they know who does.

5. We are honest, open, transparent, and direct with our internal team, our contractors, and our customers. We are a distributed, global company that respects all cultures. We're in the US (Arizona, California, Illinois, Texas, and Washington DC) and internationally we're in India, Romania, and Ukraine. Because this we foster flexible creative work environments and we're definitely not an eight-to-five company.
